

MongoDB Atlas

- NoSQL Database: Not Only SQL
- It store data in documents JSON like documents (BSON → **B**inary **J**SON)
- No predefined structure – dynamic documents
- Fast reads/write with indexing support

SQL	NoSQL
Table	Collection
Record / Row	Document
Column	Field

- Runs on AWS, Azure or Google cloud.
- Automated deployment, backup and scaling
- Build-in monitoring and alerting

PyMongo

Official Python Driver for MongoDB

- Official MongoDB Python distribution.
- Supports both synchronous and asynchronous APIs
- Pure Python implementation
- Includes BSON serialization/deserialization
- Works with Python 3.10+

PyMongo

Features

PyMongo offers powerful features:

Query Filtering

- User Python Dictionaries for flexible queries
- Eg: find

Aggregated Pipelines

- Complex data transformations in stage
- Eg: groupby

Indexing

- Speed up queries dramatically

Bulk Operations

- Batch Operation efficiently.

Setting up

MongoDB Atlas, PyMongo

Setting up

MongoDB Atlas, PyMongo

Steps

Signup

- Signup to MongoDB Atlas

Cluster

- Create Cluster and Database

Connect

- Connect MongoDB Atlas with PyMongo

Add Environment Variables

- Username
- Password
- MongoDB Connection String

vedicskill.
